Problems and Solutions Existing in Civil Engineering Construction Management

Li Chen

Ningxia Construction Engineering Group Co., Ltd. Ningxia Yinchuan 750011

Abstract: At present, the striding development of Chinese construction industry has also been realized based on the trend of the continuous improvement of urbanization level, which makes the market competition more prominent and also promotes the continuous expansion of the scale of civil engineering. However, from the point of view of the current development trend, there are still many problems in civil engineering construction management, so, on the basis of ensuring its comprehensive benefits should also pay extensive attention to its management quality, aimed at reducing the probability of construction problems from the source.

Keywords: Civil engineering; Construction management; Problem; Solution
