**Abstract:** In highway construction, the construction environment and other factors will have a significant impact on the construction progress and construction quality. At the same time, because the project construction is difficult, the project implementation steps are complex, there are a variety of safety hazards in the project construction, which seriously affect the normal operation of the highway project, can not ensure the quality of the project, can not achieve the predetermined purpose. In order to ensure the normal operation of highway engineering, this paper analyzes some hidden dangers in the construction, and puts forward solutions and suggestions for some specific problems.
